

SURFACE6 — six signals used to detect surface leakage in paired-choice benchmarks

NEGATION

01 | neg_lead

Indicator equal to 1 if the answer begins with any of `no` `not` `never` `none` `nothing` `nobody` `there is no` `there are no` `there's no`; otherwise 0.

02 | neg_cnt

Total occurrences of `no` `not` `never` `none` `nothing` `nobody` `cannot` `can't` `don't` `doesn't` `didn't` `won't` `wasn't` `weren't`.

HEDGING

03 | hedge_rate

Hedge occurrences divided by word count. Lexicon: `might` `could` `may` `generally` `typically` `often` `usually` `sometimes` `likely` `probably` `possibly` `appears to` `seems` `suggests` `roughly` `approximately` `are expected to`.

LENGTH AND SURFACE REGULARITY

04 | word_count

Number of whitespace-separated tokens: `len(text.split())`.

05 | avg_token_len

Mean character length over alphanumeric tokens.

06 | type_token

`|unique tokens|/|total tokens|`; values closer to 1 indicate higher lexical diversity.
